

Argus *Americas Biofuels*

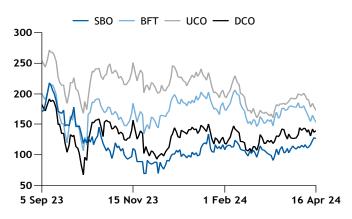

Issue 24-73 | Tuesday 16 April 2024

OVERVIEW

- US ethanol prices rose slightly in most active markets, as corn futures posted mild losses.
- Renewable identification number (RIN) credits lost value early in the session, bringing down the Argus Renewable Volume Obligation (RVO) on Tuesday.
- B99 discounts in all markets went unchanged, while B100 premiums fell alongside D4 RINs.

Renewable identification number (RIN) credits lost value early in the session, bringing down the Argus Renewable Volume Obligation (RVO) on Tuesday.

The RVO ended the session at 7.35 ¢/USG, falling 0.31 ¢/USG on the day.

2024 ethanol D6 credits fell by $2.625 \ensuremath{\varepsilon}/RIN$ as they traded between $44 \ensuremath{\varepsilon}/RIN$ and $45 \ensuremath{\varepsilon}/RIN$. Deals at $45.25 \ensuremath{\varepsilon}/RIN$ were reported after the assessment window had closed. Prior year credits were bid at a $1 \ensuremath{\varepsilon}/RIN$ discount to current year D6 RINs.

Transactions for biomass-based diesel D4 RINs materialized between 44 ¢/RIN and 45.5 ¢/RIN, softening their value by 2.5 ¢/RIN. 2023 credits received buyer interest at 43.5 ¢/RIN.

Current year cellulosic biofuel D3 RINs fell by $0.875 \ensuremath{\epsilon}/RIN$ as they were valued at $327 \ensuremath{\epsilon}/RIN$. Deals were reported at $326.5 \ensuremath{\epsilon}/RIN$ after the assessment window had closed. Credits with 2025 vintage were offered at a $55 \ensuremath{\epsilon}/RIN$ discount to current year D3 RINs.

Assessment rationale

The RVO was calculated as per the Argus methodology.

Price

CALIFORNIA CARBON

California Carbon Allowances (CCAs) slipped lower on Tuesday amid light activity.

December 2024 CCAs shed 21¢ to end the day at \$39.95/ metric tonne after trading 79 times for nearly 1.2mn t.

Prompt-month CCAs fell by $19 \, \text{¢}$ to \$38.35/t after trading 21 times for $894,000 \, \text{t}$.

December 2025 CCAs fell by $25 \not \epsilon$ to \$42.60/t and did not trade.

The California market retreated further from its recent three-week highs over today's session, as market participants await further information on an 23 April workshop being held by the California Air Resources Board (CARB) to discuss amendments to the cap-and-trade program.

CCAs for December 2024 and April 2024 delivery traded as low as \$39.71/t and \$38.10/t respectively, at the end of the first half of the day, before later activity pushed back some of the session's declines.

Activity remained thin for another session, with market sources noting the lack of volumes in transactions.

A definitive answer for the quieted market this week remains unclear, but participants may be adopting a wait-and-see approach in the short term, until regulators paint a clearer picture on how the trajectory of the program will be changed. CARB signaled last week that it is leaning toward a new greenhouse gas reduction target of 48pc from 1990 levels by 2030. The current target is set at 40pc by 2030.

The Washington Carbon Allowance (WCA) market extended its gains, with activity centered on WCAs for April delivery.

WCAs for December delivery rose by 35¢ to \$38/t and did not trade.

Prompt-month WCAs moved up by 35ℓ to \$36.50/t after trading twice for 55,000t.

The WCA market has made modest gains in recent sessions, rising on bullish sentiment as state regulators continue work to align the state's cap-and-trade program with the California-Quebec market over this year to pave the way for linkage.

LCFS

California Low Carbon Fuel Standard (LCFS) credits slumped with trade focused on more immediate transfers.

Spot credits fell by \$1.50 to \$60.50/metric tonne. Second quarter 2024 credits were heard traded at \$62/t and then traded at \$61.50/t, \$61/t and \$60.50/t. Fourth quarter 2024 credits traded at \$62.25/t.

	Bid	Ask	Price	±
LCFS	200.00	230.00	215.000	nc

Spot LCFS credits have fallen by \$5.50/t in a week of trading sessions that included a California Air Resources Board workshop on the program's ongoing rulemaking process.

Oregon Clean Fuels Program credits were heard traded at \$70/t for prompt transfer. Forward transfers of program credits remained lower. Oregon and California both have deadlines to meet 2023 obligations by the end of this month.

Washington Clean Fuel Standard and Canadian Clean Fuel Regulations (CFR) credits have heard little discussion so far this month. Washington Clean Fuel Standard credits were bid at \$40/t. Obligated parties in the program do not need to demonstrate compliance with 2023 obligations until April 2025 as the state eases into LCFS requirements that began enforcement last year.

CFR credits last traded at C\$215/t (\$158.17/t). Environment and Climate Change Canada continues to take comment on the types and format of data associated with the program to release in a report the agency has planned to publish by 30 June.

US biodiesel

B99 discounts in all markets went unchanged, while B100 premiums fell alongside D4 RINs.

B100 premiums at New York Harbor, Houston and Chicago all slid by $3.75 \, \text{¢/USG}$, or about 2.5pc, as D4 RINs fell to their lowest level since 8 March at $47.25 \, \text{¢/RIN}$.

The bean oil-heating oil (BOHO) spread narrowed by 4¢/USG to 71.7¢/USG, its lowest level since 6 March, after May soybean oil fell by 0.56¢/lb to 44.91¢/lb. Nymex front month heating oil ticked 0.29¢/USG lower to 265.13¢/USG.

Renewable feedstock markets slipped on Tuesday as falling soybean oil futures dragged them lower.

970.00-1000.00

-10.00

The Front month CBOT soybean oil basis settled at 44.91¢/lb, for a 0.56¢/lb loss day on day. Market participants said that higher domestic soybean stocks were weighing heavily on values. According to the National Oilseed Processors Association (NOPA) US SBO stocks in March were 1.85bn lbs, compared with 1.69bn lbs a month earlier. Participants also noted that buyers did not have much available storage, further depressing demand.

Distillers corn oil values fell in the Midwest by $1.5 \/elb$, as value was pegged between $41 \/elb$ and $42 \/elb$, although there was talk of values dropping lower still. In the Gulf, DCO volumes exchanged hands as low as $44.5 \/elb$ and as high as $45.5 \/elb$, for a $1 \/elb$ loss day on day.

Yellow grease trade in the Gulf slipped by a penny, as a deal

was reported at 38.5¢/lb.

lowa choice white grease deals were reported at 39.5 /lb, while the low was set at 38 /lb based on market feedback that volumes could be secured at that level as well.

Toward the Southeastern US, Alabama UCO trucks were reported trading for decent volume at 39.5¢/lb.

US ETHANOL

US ethanol prices rose slightly in most active markets, as corn futures posted mild losses.

Front month CBOT corn futures settled at 431 e/bushel, losing 0.5 e/bushel on the day, extending this month's streak of little change in futures.

Chicago Rule 11 railcars rose by 2.25 ¢/USG to 166.25 ¢/USG, bound by trade between 166 ¢/USG and 166.5 ¢/USG.

Prompt in-tank transfers at Kinder Morgan's Argo terminal near Chicago ticked higher by $0.25 \ensuremath{\rlap/e}/USG$ to $163.55 \ensuremath{\rlap/e}/USG$, after volumes swapped hands between $163.5 \ensuremath{\rlap/e}/USG$ and $163.6 \ensuremath{\rlap/e}/USG$. April any transfers held mostly unchanged at $163.88 \ensuremath{\rlap/e}/USG$, amid bids and offers at $163 \ensuremath{\rlap/e}/USG$ and $164.75 \ensuremath{\rlap/e}/USG$. May transfers heard bids and offers at a $5.5 \ensuremath{\rlap/e}/USG$ and $2 \ensuremath{\rlap/e}/USG$ premium to April and were assessed at $167.63 \ensuremath{\rlap/e}/USG$.

Prompt Sewaren in-tank transfers rose by 3.25 ¢/USG to 175.75 ¢/USG, framed by bids and offers at 171.5 ¢/USG and 180 ¢/USG.

ANNOUNCEMENT

Argus successfully completes annual losco assurance review

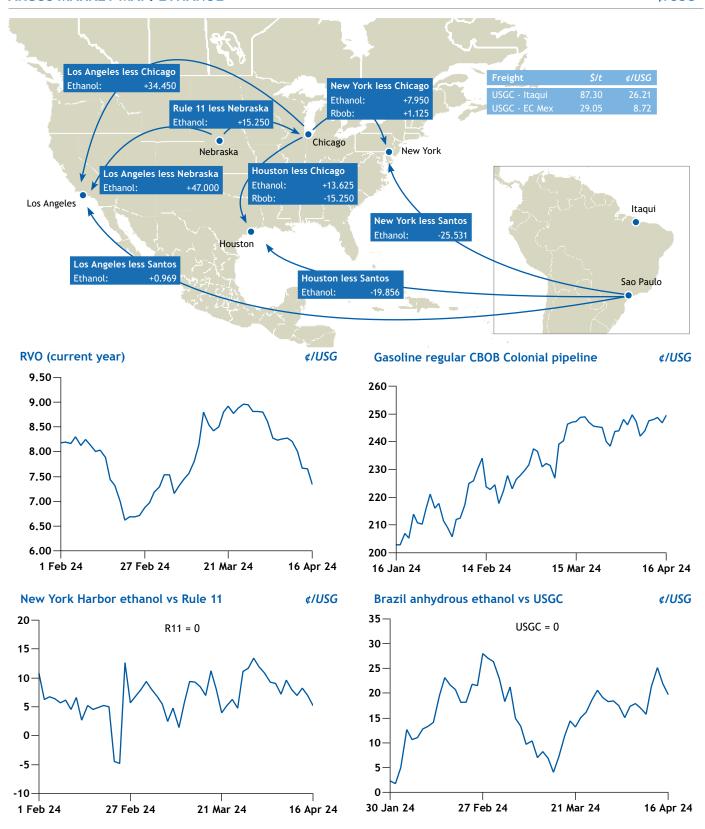

Argus has completed the 12th external assurance review of its price benchmarks covering crude oil, oil products, LPG, chemicals, thermal and coking coal, natural gas, biofuels, biomass, metals, fertilizers and agricultural markets. The review was carried out by professional services firm PwC. Annual independent, external reviews of oil benchmarks are required by international regulatory group losco's Principles for Oil Price Reporting Agencies, and losco encourages extension of the reviews to non-oil benchmarks. For more information and to download the review visit our website https://www.argusmedia.

VWA = Volume Weighted Average

Weaker demand for hydrous ethanol snapped a three-day rally in Sao Paulo as fuel retailers stood on the sidelines on Tuesday.

Buying interest remained strong in the neighbouring states of Minas Gerais and Goias. The volume-weighted average of reported transactions ended the session R42/m³ lower to R3,015/m³ ex-mill in Ribeirao Preto.

On the export market, losses on the currency market for the Brazilian real was the main catalyst for fob Santos cargoes, which fell by \$5/m³ to \$445-596/m³. Risk aversion in global financial markets pressured the Brazilian real against the US dollar as geopolitics tensions mount in the Middle East.

Imported ethanol from the US rose by $6/m^3$ to $539-552/m^3$, tracking mild gains on the US domestic market.

US judges raise doubts over RFS waiver denials

A panel of federal judges appears skeptical to how President Joe Biden's administration justified its blanket denial in 2022 of all pending requests from small refineries to receive waivers from the Renewable Fuel Standard (RFS).

The US Environmental Protection Agency (EPA) that year rejected all pending requests by small refineries for economic "hardship" exemptions from RFS between 2016-2021, marking a major shift from years of handling the exemption requests on a case-by-case basis. To support its blanket denial, EPA argued that small refiners do not face any disproportionate hardship because their costs of complying with the RFS are passed along to customers through the sales price of diesel and gasoline.

But a three-judge panel hearing litigation challenging EPA's waiver denials, at oral arguments today, appeared to have some doubts about the agency's justification to reject a total of 105 small refinery exemption requests in April and June of 2022.

The judges' doubts largely focused on EPA's claim that a small refinery can fully pass through its RFS compliance costs by buying renewable identification numbers (RINs) "ratably," or the timely purchasing just enough RINs to cover their recent gasoline and diesel sales. EPA has argued that for a small refiner to be eligible for a hardship exemption, an initial criteria would be buying RINs as soon as possible to when it sold fuel, so that the RIN price aligns with fuel prices.

"What is ratability?" DC Circuit judge Cornelia Pillard asked during arguments. "If EPA doesn't give a clear definition of what it is, and then say that definition is supported on the economic data, then I don't think it's connected the dots."

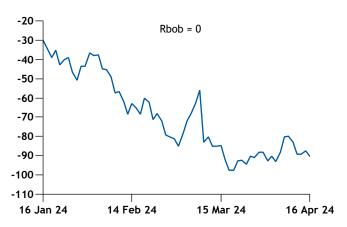

Other judges on the panel appeared receptive to arguments from small refineries — defined as processing up to 75,000 b/d of crude — that they face difficulty acquiring RINs from other market participants in small enough quantities to match their sales. Among the problems, the judges said, is that small refineries might face abrupt spikes in compliance costs incurred in a given year, even though over the long-run economic data shows the costs will level out.

"These applications are not in the long run, they're by the year," judge Florence Pan told an attorney for EPA. "I just think that that's a significant flaw in your reasoning."

Judge Neomi Rao said it seemed that EPA had made a "new assumption this market is perfectly efficient" and costs

Gasoline regular RBOB Colonial pipeline

would be fully passed along in fuel prices, even though the US Congress had assumed when it enacted the underlying laws supporting the RFS that economic hardship waivers for small refineries would at times be justified.

EPA's attorneys defended its approach to denying the hardship exemptions during oral arguments. EPA has said based on its experience, small refineries can acquire RINs in small quantities on a regular basis through brokers within days of incurring compliance obligations.

"Sometimes it'll be high and sometimes it'll be low, but at the end of the day what EPA found is it balances itself out," attorney Bryan Harrison said on behalf of EPA.

The same panel of judges also heard arguments in a separate lawsuit filed by the ethanol group Growth Energy challenging EPA's related decision to give small refineries an "alternative" compliance approach for 2016-18, after it retroactively rejected their requests for waivers. Growth Energy argues that EPA had exceeded its authority by easing compliance for small refineries.

By Chris Knight

Calumet Montana producing 2,000 b/d of SAF

Specialty refiner Calumet is producing 2,000 b/d of sustainable aviation fuel (SAF) at its Montana Renewables facility, according to an operational update today.

The Great Falls, Montana, plant is currently processing 12,000 b/d of renewable feedstocks and the company has worked through a backlog of more expensive feedstock that was stockpiled when it repaired part of its hydrogen plant in the second half of last year, Calumet said.

The company has previously said it plans to add 3,000 b/d of capacity at the Montana refinery in 2025, upping nameplate capacity to 18,000 b/d.

"Significant further expansion of SAF production remains a strategic priority," the company said today.

US retail gasoline prices extend gains

US average gasoline extended gains beyond the six-month high reached in the prior week while diesel resumed declines, according to Energy Information Administration (EIA) data.

The nationwide average retail price for gasoline rose by a further $3.7 \ensuremath{\varepsilon}/\text{USG}$ in the week ended 15 April to \$3.63/USG, its highest level since the week ended 9 October when price averaged \$3.68/USG. Average prices rose across most regions, supported by a $10.5 \ensuremath{\varepsilon}/\text{USG}$ gain in the US west coast. The Gulf coast was the only region to face price declines, slipping by $3.8 \ensuremath{\varepsilon}/\text{USG}$ on the week.

Conversely, US retail diesel prices fell by 4.6¢/USG on the week to \$4.02/USG, remaining above \$4/USG for a second consecutive week. National diesel prices surpassed the \$4/USG threshold the prior week for the first time since early February.

Average diesel prices declined across all US regions, led by a 5.2¢/USG loss in the Rocky Mountain region. Average price losses in that region nearly offset the gain in the week prior, returning the average price back below the \$4/USG mark after passing that level in the prior week for the first time since 11 December.

US average retail gasoline prices were 3.5¢/USG lower than

a year earlier, while diesel prices were down on the year by 10.1¢/USG.

Boeing to ramp up SAF purchases

US aircraft technology developer and manufacturer Boeing plans to purchase 7.5mn USG of blended sustainable aviation fuel (SAF) and SAF certificates through Finnish refiner Neste and its partners.

EPIC Fuels will supply 2.5mn USG and AvFuel will supply 1.5mn USG of the total volume with the rest delivered from Neste. The purchase includes book and claim SAF certificates corresponding to emissions from conventional jet fuel. The physical delivered product will consist of a 30pc SAF and 70pc conventional jet fuel blend.

To date, Boeing's intake of blended SAF totals 9.4mn USG, supporting its ecoDemonstrator program and the company's commercial operational flights through 2024.

The company has made similar purchases in recent years as well as supported SAF development through capital funds organized by leaders across the aviation industry.

Barge operations on hold near Pittsburgh

Freight movements on the upper Ohio River remain suspended near Pittsburgh, Pennsylvania, following a multi-barge breakaway on 12 April, impacting coal, petroleum coke and other products.

The area has been inundated with rain recently, boosting water levels and causing high currents that make it difficult for barges to navigate, barge operator Campbell Transportation said.

At least 23 loaded open-top hopper barges and three empty barges broke away from their moorings with at least eight ending up adjacent to the Emsworth lock and dam, where the Ohio and Monongahela rivers meet.

Campbell said 17 of those barges had been secured and were under control as of 12pm ET on 15 April.

Another barge is believed to have sunk in the pool at the Dashields lock and dam near Coraopolis, Pennsylvania. Campbell has been using sonar to find the barge.

"We are actively developing a recovery plan for all affected vessels, which will be implemented when safe for the recovery workers, barges, and the public," Campbell said.

The company is working with state and federal authorities,

including the Coast Guard, US Army Corps of Engineers (Corps) and Pennsylvania State Police.

First quarter freight volume moving upstream on the Ohio River through the Emsworth lock fell by 8.8pc, but was offset by a 15pc rise in downbound traffic, Corps data show. First quarter traffic through Dashields rose by 3.9pc while downbound freight rose by 13pc.

Brazil's soybean harvesting behind last year

Brazil's 2023-24 soybean crop harvesting advanced by 6.8 percentage points this week but still lags year-earlier progress, according to national supply company Conab.

Soybean: Harvesting reached 83.2pc of sowed area in the week ended 14 April, down from 85pc completion in the 2022-23 season during the same period last year. Sao Paulo is the only state where activities are done.

Summer corn: Harvesting advanced to 52.9pc of Brazil's planted acreage as of 14 April, up by 1.9 percentage point from the previous week but behind the 54.8pc harvested in the 2022-23 season a year ago. Maranhao and Piaui states have yet to begin activities, compared with only Piaui in the prior year.

Winter corn: Planting reached 99.9pc of expected area in the week ended 14 April, up from 99.5pc in the previous week. That is slightly above the 99.8pc sowed in the last season in the same period. Minas Gerais and Mato Grosso do Sul are the only states where planting is not finished yet.

Cotton: Planting remains virtually complete, as Goias state continues with 99pc sowed since 17 March. The 2022-23 crop was fully sowed at this time in 2023.

Brazil's Parana summer corn harvest at 96pc

Harvesting of the 2023-24 first corn crop in Brazil's southern Parana state advanced little in the last week, while crop conditions worsened as water restriction hamper crop development in most regions.

Activities advanced by one percentage point to 96pc of sowed area in the week ended 15 April, according to Parana's department of rural economics Deral.

That is still 14 percentage points ahead the 2022-23 progress in the same period last year.

Summer corn crop conditions deteriorated since 8 April, with areas rated in good quality falling by six percentage

points to 37pc. Crops in bad conditions rose by five percentage points to 24pc, while those with medium conditions increased by one percentage point to 39pc.

Winter corn

Conditions for the 2023-24 second corn crop also worsened in the week ended 15 April, although some regions had registered low rain volumes.

Areas rated as good conditions dropped by three percentage points to 69pc, while areas with medium and bad conditions increase by one percentage point and two percentage points, respectively, to 21pc and 10pc.

Planting for the 2023-24 winter corn crop was finished as of 1 April and harvesting has yet to begin.

Soybeans

Parana's 2023-24 soybean harvest reached 98pc as of 15 April, up from 97pc in the previous seven-day period, according to Deral data.

The 2022-23 oilseed crop was 97pc harvested at this time a year ago.

Soybean crop conditions slightly improved in the past week. Areas considered in good quality rose by one percentage point to 76pc. Areas classified in medium conditions fell by one

percentage point to 23pc, while those in bad quality remains at 1pc.

Wheat

Parana's wheat crop planting reached 1pc of the state's expected acreage in the week ended 15 April.

That is in line with the progress in the 2023 cycle a year ago. By Maria Albuquerque
