MARKET COMMENTARY

■ Usual interpretation and usage of the RSI are that values of 70 or above indicate that a security is becoming overbought or overvalued and may be primed for a trend reversal or corrective pullback in price. An RSI reading of 30 or below indicates an oversold or undervalued condition.

■ Bollinger Band Width percentage illustrates volatility in percentage terms. The higher the value, the greater the recent percentage price swings in a commodity or stock.

■ Crude palm oil futures values remain under pressure as softer rival edible oils and plans to by OPEC to boost crude oil output weighed on the market. But, losses have been limited as Malaysia’s palm oil stocks are expected to decline going forwards as a seasonal slowdown in production coincides with rising exports to meet festive season demand, the Malaysian Palm Oil Board noted.
