## LATEST NEWS

- China's clean exports hit 29-month low in Dec
- German refinery outages tighten domestic supply
- Melbourne's passenger numbers rise in 2024
- Norway's oil products demand down in 2024

## OVERVIEW

- The jet fuel crack spread narrowed slightly on 20 January, as the Singapore jet fuel swap fell by more than Dubai crude values.
- Jet fuel premiums rose in Europe on Monday, but prices could face pressure in the coming weeks as Chinese exports are set to rise.

## NEWS

### China's clean exports hit 29-month low in Dec

China's clean product exports plunged to a 29-month low in December 2024, because of a quota shortage and unfavourable export economics following tax rebate cuts.

Refiners exported 506,000 b/d of clean products in December, sharply down from a five-month high of 869,000 b/d in November and 749,000 b/d a year earlier. December exports also marked the lowest level since 449,000 b/d in July 2022.

The sharp month-on-month fall in exports was mainly because refiners brought forward some cargoes in November, before tax rebate cuts came into effect in December. Remaining quotas under general trade terms for was short in December, while export costs rose by \$2-4/bl because of the tax policy change.

Diesel exports plunged to almost a 10-year low of 17,000 b/d in December, and also marked the second lowest level on

record. It was also sharply down from 99,000 b/d in November 2024 and 389,000 b/d a year earlier. It was last lower at 16,000 b/d in January 2015.

Gasoline exports fell to an eight-month low of 161,000 b/d in December, compared with 355,000 b/d in November 2024 and 209,000 b/d a year earlier.

Jet fuel exports plunged to an 18-month low of 328,000 b/d in December, below 415,000 b/d in November 2024 and 389,000 b/d a year earlier. It was last lower at 284,000 b/d in June 2023.

Exports of oil products – including gasoline, diesel and jet fuel/kerosine – were 795,000 b/d in 2024, down from 910,000 b/d in 2023 and 910,000 b/d in 2022, custom data show. Refiners only used 88pc of the total export quotas in 2024, down from 2023's 103pc, because of lower exports under processing trade terms.

But exports under processing trade terms will likely rise on the year in 2025, because of higher taxes on exports under general trade terms. Oil product exports will remain low this year, according to state-owned refiners, although individual product trade flows will change. Refiners will export more jet fuel this year, after its share in total exports surged to an 11-year high of 44.7pc in 2024.

## German refinery outages tighten domestic supply

A fire at the 215,000 b/d Bayernoil refinery's Neustadt plant could significantly reduce supply in the south of Germany and make imports profitable again, as sellers across the country raised heating oil and road fuel prices in the week ending 17 January.

Supply is likely to tighten in southern Germany following a fire on a unit at the Bayernoil's Neustadt plant after an explosion shut production at the facility for an indefinite period.

This comes ahead of planned maintenance from March in both parts of the Bayernoil refinery, at the 77,000 b/d Burghausen facility in southern Germany and at the 193,700 b/d Schwechat refinery in Austria.

Meanwhile, increased barge demand from Lingen is pointing to a broken hydrocracker at the 95,000 b/d Lingen refinery, northern Germany.

Oil products prices in Germany have risen in the week to

## ANNOUNCEMENT

### Argus successfully completes annual losco assurance review

Argus has completed the 13th external assurance review of its price benchmarks covering crude oil, oil products, LPG, chemicals, thermal and coking coal, natural gas, biofuels, biomass, metals, fertilizers and agricultural markets. The review was carried out by professional services firm PwC. Annual independent, external reviews of oil benchmarks are required by international regulatory group losco's Principles for Oil Price Reporting Agencies, and losco encourages extension of the reviews to non-oil benchmarks. For more information and to download the review visit our website <https://www.argusmedia.com/en/about-us/governance-compliance>

17 January, catching up with Ice gasoil futures value increases, after new US sanctions against Russia were announced on 10 January.

But the price increase in southern Germany was less

pronounced because the region remained well supplied. Sellers at the 215,000 b/d Bayernoil refinery – before the fire at Neustadt – lowered their prices as a result of lower seasonal demand. And the unplanned shutdown at Bayernoil could eat

## Melbourne's passenger numbers rise in 2024

Total passenger traffic at Australia's Melbourne airport, the nation's second busiest, rose by 7pc on the year in 2024 but remained below pre-Covid 19 levels.

International passenger numbers rose by 15pc on the year in 2024, and were 1pc higher than that for 2019. But domestic travel continues to lag pre-pandemic levels and rose by just 3pc on the year.

Lower domestic passenger travel could be a result of increased prices for tickets on key routes, given lower competition, which the Australian Competition and Consumer Commission identified in its latest *Domestic Airline Competition* report in November 2024.

This came after the exit of minor airliner Rex from Australia’s jet air travel market. Rex ended its jet operations on 31 July 2024 and now services only small airports using light aircraft. The average airfare on all major city routes increased

by 13pc from 31 July to 30 September 2024, the ACCC found.

Australia’s jet fuel imports averaged 127,000 b/d in the first 11 months of 2024, 8pc higher than a year earlier. Most of the country’s imports are from Asian countries.

Sales averaged 160,000 b/d for January-November 2024, 11pc above the 144,000 b/d recorded by Australian Petroleum Statistics for the same period in 2023. Australian government commodity forecaster the Office of the Chief Economist (OCE) in December forecast that increased air travel will drive oil

product demand over the next two fiscal years.

By Tom Major

### Norway's oil products demand down in 2024

Norwegian demand for oil products fell in 2024, according to national institute Statistics Norway.

Total oil product deliveries fell to 113,200 b/d, down by 11pc from November and by 5pc from December 2023. Average deliveries for the year were down by 6.6pc.

Jet deliveries fell by 20pc on the year in December and by 4.4pc in 2024, which might be owed to an updated jet fleet operating with greater fuel efficiency. A growing portion of airline Norwegian's fleet comprises latest technology Boeing 737 MAX 8, which the manufacturer says provides up to 15pc greater fuel efficiency than a typical 737. These more efficient aircraft make up 20 of Norwegian Air's 87 fleet and it has 50 more on order to be delivered from 2025, the company said in 2024.

Motor gasoline deliveries fell by 7pc from December 2023 and by 6pc in the year. According to the Norwegian Electric Vehicle Association almost 100,000 new electric cars were registered in 2024. Below 1pc of new registration cars in Norway were gasoline in November, according to the European Automobile Manufacturers' Association.

By Isabella Reimi

## MARKET COMMENTARY

### Asia-Pacific

The jet fuel crack spread narrowed slightly on 20 January, as the Singapore jet fuel swap fell by more than Dubai crude values.

The February-March spread was assessed at \$0.90/bl in backwardation, also narrowed from \$1.00/bl in the previous session. Meanwhile, the February regrade – or the price differential between Singapore jet-kerosine and gasoil swaps – widened to -\$2.40/bl, as the Asian gasoil complex strengthened by more than the jet fuel market.

In tender sales, China's state-controlled refiner Wepec offered another February-loading jet fuel spot cargo. The 38,000-41,000t (299,000-323,000 bl) cargo will load from Dalian within 15-17 February. Bids are to be submitted by 20 January with same-day validity. Wepec last sold, through a spot tender, one early-February loading jet fuel cargo. The 38,000-42,000t will load from the same port within 6-8 February. The price was around a \$1.20/bl discount to the Singapore spot assessments for jet fuel, said traders. The spot tender had closed on 17 January.

Meanwhile in south Asia, India's private-sector refiner Nayara Energy offered, through a spot tender, one February-loading jet A-1 fuel cargo. The refiner is offering one 60,000t cargo for loading from Vadinar during 16-20 February. The pricing basis will be on the whole month average of Mideast Gulf spot jet fuel assessments for February. Bids are to be submitted by 20 January with same-day validity. Nayara previously sold one 60,000t jet fuel cargo for loading from Vadinar over 27-31 January. The price was around a \$0.60/bl premium to the whole month average of Mideast Gulf spot jet fuel assessments for January, said market participants. The tender closed on 17 December.

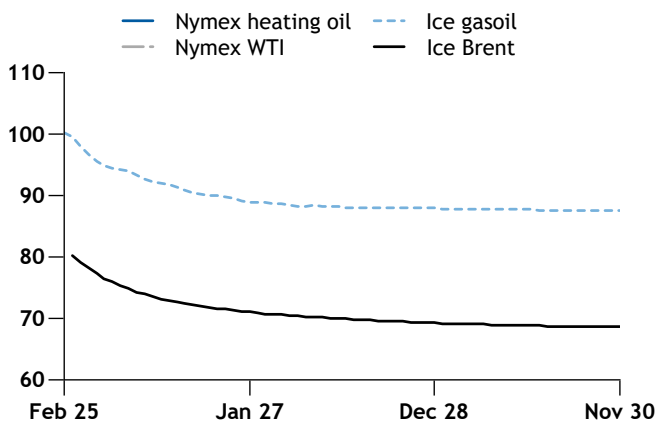

### Europe

Jet fuel premiums rose in Europe on Monday, but prices could face pressure in the coming weeks as Chinese exports are set to rise.

Chinese jet fuel exports fell to an 18-month low of 328,000 b/d in December. This was around 20.6pc lower than November and over 15pc lower than in December 2023. China's clean product exports totalled 506,000 b/d last month, the lowest in 29 months. Jet fuel accounted for 44.7pc of total clean product exports however, which was an 11-year high. The monthly decline was mainly because of tax rebate cuts that came into

Futures forward curve

\$/bl

force in December, leading refiners to load some cargoes in November instead. Due to the changes in tax policy, export costs rose by \$2-4/bl in China.

China may produce even more jet fuel this year, largely because of a collapse in domestic road fuel demand. The country is set to export a record volume of jet fuel this month at around 560,000 b/d. Although much of this will be shipped between Chinese ports, there will still be ample jet fuel available to foreign buyers. The Lunar New Year holiday could absorb some Chinese supply in Asia-Pacific over the coming weeks as travel picks up. But Vortexa already identifies a vessel carrying around 36,000t of jet fuel sailing towards Alaska, as well as a similar volume on a vessel bound for New Zealand and 86,000t en route to Australia.

Market participants have said that some jet fuel could sail as far as Europe if economically viable. Just 40,000 t/d of jet fuel of non-European origin arrived in Europe during the first-half of January because of persistently poor arbitrage opportunities during winter, Vortexa shows. This, coupled with high Chinese exports, will leave Mideast Gulf and Indian refiners looking for alternative export opportunities until the European market firms. At least 100,000t of Indian jet fuel will have arrived in the US by the end of January, while India also dispatched a 40,000t cargo for Brazil over the weekend. Fixture lists indicate an increase in ships booked to load in the Middle East for South Africa, following a fire at Natref's Sasolburg refinery that will tighten the supply of oil products.

BP bought two jet fuel cargoes cif Rotterdam in the opening session of the week. The first was sold by Unipet for delivery aboard the *Nolde* between 10-14 February at a \$2/t premium to spot prices spanning 16-28 February. The second, aboard the *Torm Kristina*, was sold by Glencore with delivery dates spanning 2-6 February and priced at a \$1.50/t discount to spot prices between 21-31 January. The trades were equivalent to premiums of \$47/t and \$43.75/t to Ice February gasoil futures, after normalising to an Ice gasoil basis and considering delivery periods.

Jet fuel cargoes were assessed at a \$45.50/t premium to front-month Ice gasoil futures on Monday, rising by \$4/t from Friday. This was determined by the volume-weighted average of the session's two reported trades.

BP also reportedly bought a 4,000t barge from Shell in the same trading window. The barge was for loading from a FARAG port between 29 January - 2 February and was sold at a \$33.50/t premium to Ice February gasoil contracts. This premium was unchanged after normalising for loading dates.

Jet fuel barges were assessed at a \$33.50/t premium to front-month Ice gasoil contracts on Monday, up by \$3.50/t from the previous assessment, in line with the deal agreed between Shell and BP.

**Argus Assessment Rationale Database**

For prices used in financial benchmarks, Argus publishes daily explanations of the assessment rationale with supporting data. This information is available to permissioned subscribers and other stakeholders.

Subscribers to this report via Argus Direct or MyArgus may access the database [here](#).

Other subscribers may request access [here](#) or contact us by email at [sales@argusmedia.com](mailto:sales@argusmedia.com).

**METHODOLOGY**

Argus has been assessing daily global jet fuel prices since 1986. These prices appear in the Argus European Products, Argus Asia-Pacific Products, and Argus US Products reports. We have consolidated all our daily jet fuel prices, market commentary, and news into the Argus Jet Fuel report in order to better serve the airline and supplier community. The methodologies for all of the prices in this report are located at [www.argusmedia.com](http://www.argusmedia.com) within the methodology document for the above named market report. On our website you will also find the Argus Global Compliance Policy and other useful reference material.

Argus assesses global prices in petroleum, electricity, natural gas, coal, emissions and transportation markets. We use precise and transparent methodologies to assess prices, and many Argus assessments are used as a reference price by major market participants in spot deals, term contracts, swaps, transfer pricing and mark-to-market. The price data included in this report are available as a feed into your company's systems, supplied either directly from Argus or from several data aggregators that serve the industry. Argus offers various tools on its website for receiving this report and the price data included in it.
